

HOOF CARE

Taking care of our horses' hooves, or feet, is very important to keep our horses healthy! We use a metal hook called a "hoof pick" to scrape out all of the dirt, rocks, and sticks that might have gotten stuck in our horses' hoof. This helps keep them from hurting their foot and causing them to limp, or go "lame." Imagine if you had a rock stuck in your shoe that you couldn't get out. That's how it feels to horses if we do not clean out their hooves! Color the picture below the same color as your favorite JHTR horse!
